CONTROL HARNESS FAQ

Steering Wheel Control Harness FAQ:

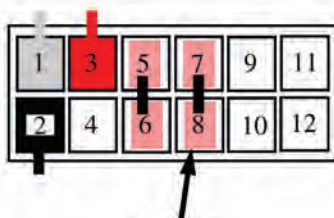

Q: If the vehicle plugs do not match, can I cut the control harness and wire the steering wheel control module into the vehicle?

A: No, The Aerpro control harness module has been programmed specific to the vehicle.
If the Control harness plug does not suit the vehicles radio plug, The Control harness will not suit your vehicle.

Q: I have installed a pioneer unit, When I Turn On Unit, the Steering Wheel controls Do not Function correctly.

A: Pioneer head units can have different rest voltage for the steering wheel control input. This can cause the steering wheel controls to function incorrectly. There are Two Solutions available. Please see below:
1.If you have purchased the APPIOA and the steering wheel controls are not functioning correctly, you will need to remove the link between pins 7 & 8 (see Fig 1 below). Link can be removed by de-pinning the block using a small screw driver. Once link is removed from patch lead, disconnect power from steering wheel control module for 30 seconds so the Module will recognise the change to the patch lead.
2.If option 1 does not correct the problem, you will need to purchase the APPISOA. The APPISOA will suit both Pioneer and Sony head units.
The APPISOA has an inline PCB which automatically detects which brand unit is being installed and adjusts programming to suit the aftermarket unit .

Fig 1.

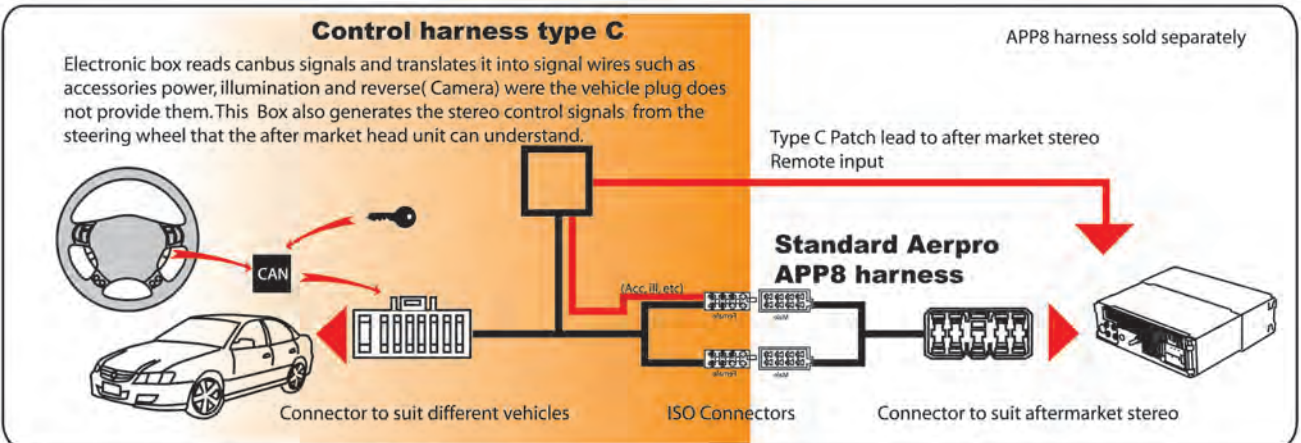

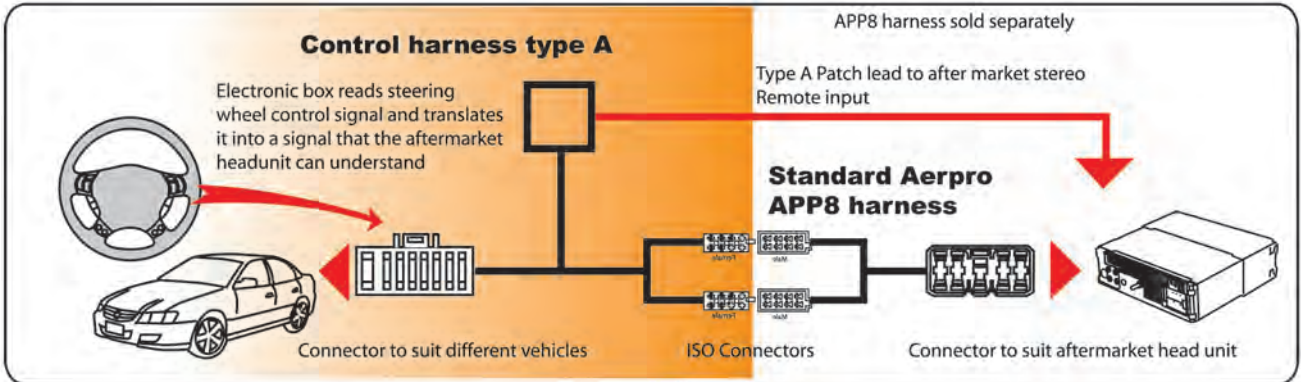

Remove the link between pins 7 & 8

Q: MY aftermarket head unit does not have a direct Steering Wheel Control Input. Is there another Option?

A: Yes, If your Head unit does not have direct steering wheel control input, you can use the Aerpro APUIR (ref. page 33). The APUIR is a universal Infra-red adaptor which enables control of an aftermarket head unit (with IR control) from the steering wheel controls of an analog Vehicle, allowing up to 10 buttons to be programmed. The head unit must have a remote control handset for the IR adaptor to learn from.

Q: What is the difference between a TYPE A and a TYPE C Control Harness?

ISO SECONDARY SIDE HARNESSES

ISO Secondary Side Harnesses To Radio

The APP8 series of harnesses are designed to plug directly into the back of the majority of aftermarket radios (Alpine, Clarion, JVC, Kenwood, Panasonic, Pioneer, Sony) leaving you with a male pair of ISO plugs on the other end to connect. The male ISO connectors are then simply plugged into the corresponding 'APP' plug, or existing original factory female ISO plugs (depending on vehicle), and you're away. How easy is that!

OE Integration

Hi To Low Level Converter And Line Driver

- This will convert your existing cars factory head-unit's high level (speaker output) into a line level (RCA) output allowing you to add on an after-market amplifier speakers or subwoofer.
- For use as a high end alternative to the basic "transformer type" converter
- This item yields superior sonic performance to a standard converter as well as offering a higher RCA voltage output (up to 10V)
- Less distortion and less hiss (better signal to noise ratio)
- The system can also be used as a line driver to boost RCA voltage - 4 volts to 10 volts, either from a headunit or even directly from an MP3 player / iPhone.
- Remote trigger in/out
- Input gain adjuster
- Maximum power clip indicator
- THD: 0.01%
- Signal to Noise: > 87dB
- Maximum DC input voltage: 20V

2 Channel Bass Enhancer

- This device restores the dynamic range of the bass signal from the factory system which is often heavily compressed.

APBE2

9 317114 909060

6 Channel Hi To Low Level Converter With Sub Woofer Input And 6 Band Equaliser

- For use as a hi end hi to low level converter OEM integration solution.
- This item yields superior sonic performance to a standard converter offering higher rca voltage, less distortion and less hiss.
- The output equaliser allows you to adjust the equalisation curve to compensate for signal losses associated with the factory head unit outputs
- Correct/enhance the after market speaker curve.

APHL6EQ

9 317114 909077

Hi-Lo Level Signal Summing Interface

- Complete integration of aftermarket audio components into Vehicle OEM system.
- Sums and balances multiple signals from Factory Stereo.
- Sums up to four Speaker-level stereo pairs down to single stereo RCA low-level output.
- Built in aux. input for connection to Portable Audio devices.
- Four line-level stereo RCA outputs connect to Amplifier.
- Max Voltage in: 40V RMS
- Max Aux-in Voltage: 40V RMS
- Signal to Noise Ratio: Channels 1-4: 90dB
- Frequency Response: 20-22,000 Hz
- Gain Range: Channels 1-4: -30dB to +4dB
- 2 Amp Fuse
- Dimensions: 140mm D X 268mm W X 36mm H

No extra holes

Strategic placement of the Patented Gator Stealth Cams mounting eyelets takes advantage of the Australian standard number plate mounting fastener positions. This means that no additional holes need to be drilled into the vehicle to mount the camera. The mounting system is located behind the number plate making the mounting hardware virtually invisible. Allowances have been also made in the placement of the camera head so that basic number plate frames can still be used.

New patented camera design renders mounting hardware almost invisible.

BASSIX
SERIES SUBBOXES

S2

As the name says, Bassix is exactly that, a Basic. Bass system. The Bassix range of boxes is designed to suit customers looking for a small enclosure, a simple solution at a competitive price.

MAXCOR
SERIES SUBBOXES

S4

You Get More with Maxcor!
This range is for people wanting more than just a simple box but still at a value for money price. Maxcor is all about value. Giving you better results whilst keeping the price low. The designs are more advanced and the construction material density is higher than the Bassix Range. The overall finish is better too. This all results in a better sounding and better looking subwoofer system for your car.

UNIBOX II
SERIES SUBBOXES

S6

Unibox Series 2 **10 & 12 inch**

The Unibox range is designed mainly for sedan installations where the woofer is planned to face into the back seat rather than into the boot area. The ports have been strategically placed on top of the box towards the back so that advanced installers can remove and re-mount the ports up into a rear parcel shelf. Another key design feature is the low height of the box (Needed for many under shelf sedan installations). The Unibox range is also generous in terms of its volume and port tuning length making it a very nice sounding enclosure whilst still having a lively response curve centred around the bass kick drum frequency. All sides of the enclosure are made from high grade 18mm MDF.

Unibox Series 2 **15 inch**

Unlike the 10 and 12 inch versions the Unibox UB15S2 is unique in that it is designed to work facing into the back seat or facing into the boot area. The reason that this box is so versatile is that we have cut the back and front baffles at the same slope using the Aerpro snug fit angle so that the box can fit both ways. Dual 4 inch ports give the box greater efficiency and lower port noise. Its a great all round box, All sides of the enclosure are made from high grade 18mm MDF

THE ROYALE WITH CHEESE

For some time now we have been asked for Bigger boxes for SPL Lovers and sound quality listeners. You asked, we listened. The TRWC 12 and 15 inch box's are about the same size box that you would expect for a box designed for 2 woofers. What this allows us to do is build in a port with a massive cross sectional area whilst keeping the tuning frequency low. The result is fantastic sound quality, Literally no port noise and very very high efficiency. At a recent bass battle competition it was demonstrated that more SPL can be produced with just one woofer in a TRWC enclosure than 2 of the same woofers in a smaller enclosure. The next time you're thinking of putting together a big system you might consider building it with one really nice sub in a TRWC rather than 2 cheaper subs that add up to the same price!!!. The results will surprise you!

SQ
SERIES SUBBOXES

S12

SQ stands for Sound Quality. So what makes sound quality a reality? Its all in the design. SQ series Boxes are tuned lower with larger volume and Lower port tuning, when coupled with most woofers they produce a flatter response than many other prefabs on the market. And to top it off the SQ series boxes look incredible!

EOSS
SERIES SUBBOXES

S14

EOSS loaded (Comes complete with subwoofer installed) subwoofer box systems are available in 10 and 12 inch. They are very very small, thin enclosures with a flat subwoofer installed they offer limited bass "Extension" due to their tiny size but do offer great amounts of sub bass with surprisingly good sound quality. When space is tight the Eoss range represents great value for money.

Whilst the unibox range is quite comfortable in a hatch or wagon the UB series really comes into it's own in a sedan installation. It is designed with a low profile to fit under the back shelf with the woofers facing forward
The Unibox II series is designed for enthusiasts wanting more. This series is larger in volume than the bassix series offering improved low frequency extension over smaller enclosures in conjunction with a solid 18Mmm MDF construction.

UB15S2

The UB15S2 is a fresh new approach in the UB series range. Its Baffle is more up right giving space for larger woofer magnet structures and it now packs two 4 inch ports with a combined port area of 162cm sq cm (Equivalent to a 5.7 inch single port). Coupled with Aerpro's Snug fit feature on its front baffle and rear face, it will fit snug up to most back seats without wasted space, regardless of which way you face the box. TRWC12

There has been a common muttering of discontent amongst hardcore enthusiasts when it comes to Pre Fabricated enclosures. Many bloggers have been telling us "PRE FAB'S ARE TOO SMALL". Well, we are listening and we think we now have what you have been waiting for.

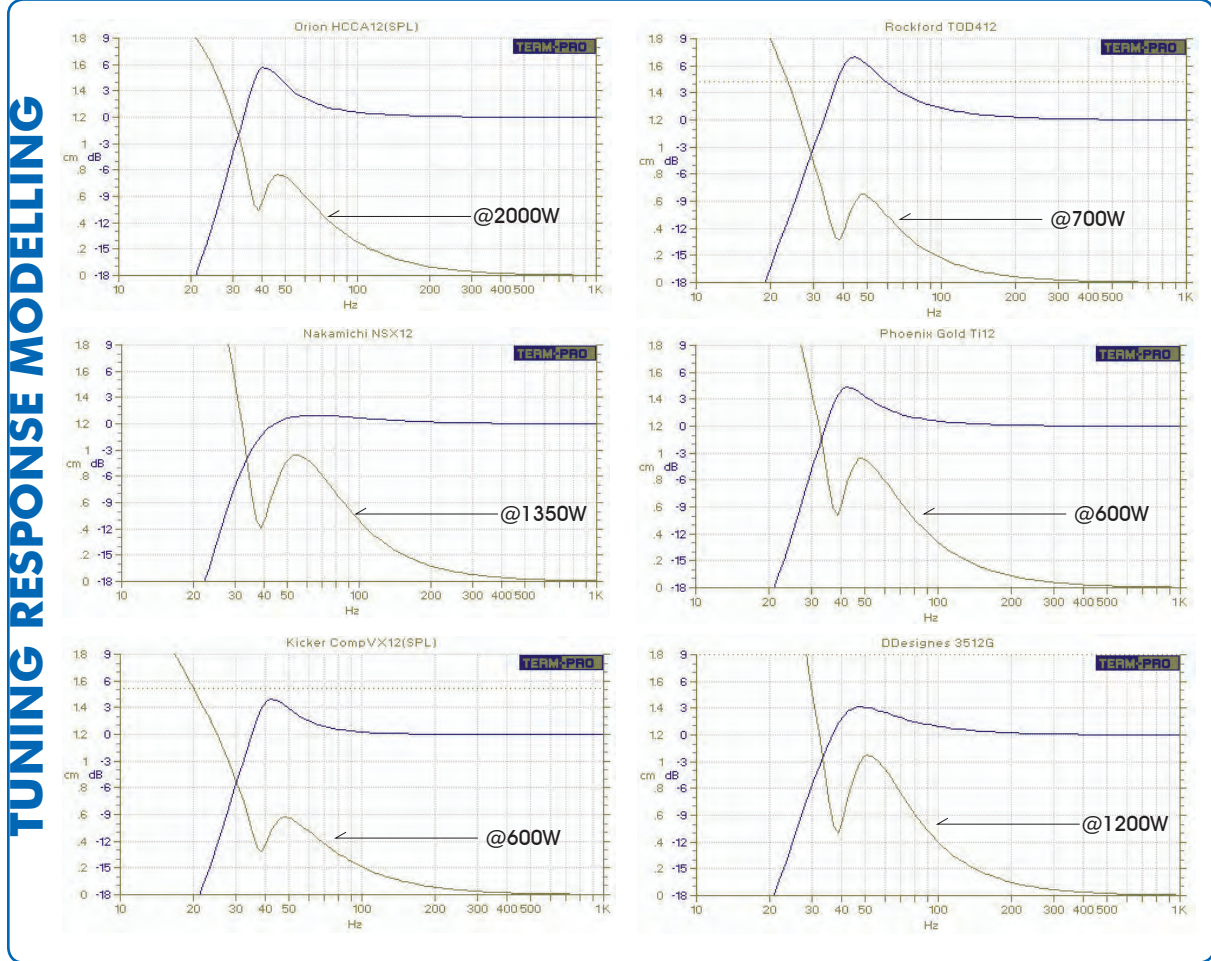

THE ROYALE WITH CHEESE

We have been studying class leading custom Fabricated designs in both sound quality and SPL competitions. The result of this is the TRWC design. The port area is massive for hi efficiency (SPL) and it has an anti turbulence flair at each end (SQ) making it even more efficient and quiet. Combined with its big volume, it's ready for Big hitting subs and amps regardless of whether you're an SQ music connoisseur or a SPL ground pounder.

TRWC15

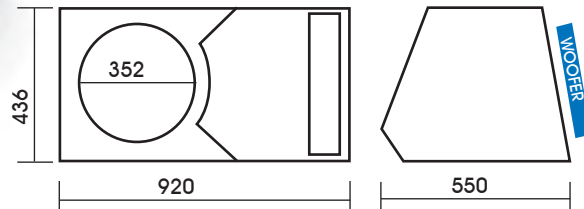

THE ROYALE WITH CHEESE

Like its little brother the TRWC15 is Big in every way. However, the TRWC-15 takes BIG to a whole new level. It has a Bullet proof 21mm MDF front baffle (36mm in some places) to hold in place the largest subwoofers on the market.

Its Anti Turbulance designed slot port is MASSIVE. How's the tuning? Nice and low at 36Hz (Can be made lower by inverting the sub).

The philosophy of TRWC system design is quite simple. Use one big sub on a decent sized amp you will get more bass (Better Bass) than 2 subs in a similar sized box sharing half the enclosure each. The added bonus is that you also get the advantage of the lower frequency tuning so that you can Pound the ground with your favourite tracks or feel the depth of the greatest SQ recordings...

Introducing the new angle on slot porting. The Xslot range is all about sound quality, efficiency and striking looks in a mid sized enclosure. It has a custom made look at an affordable price. Its slot port is tuned to please the listener looking for extra bass extension, whilst still keeping that slot port efficiency that creates great sound pressure without the need for truck loads of power. The Enclosure is finished off beautifully with its striking protective grill bars.

CONTROL HARNESS FAQ

Steering Wheel Control Harness FAQ:

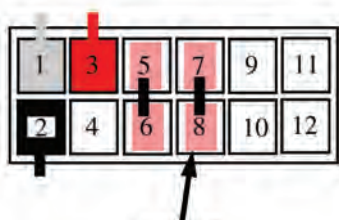

Q: If the vehicle plugs do not match, can I cut the control harness and wire the steering wheel control module into the vehicle?

A: No, The Aerpro control harness module has been programmed specific to the vehicle.
If the Control harness plug does not suit the vehicles radio plug, The Control harness will not suit your vehicle.

Q: I have installed a pioneer unit, When I Turn On Unit, the Steering Wheel controls Do not Function correctly.

A: Pioneer head units can have different rest voltage for the steering wheel control input. This can cause the steering wheel controls to function incorrectly. There are Two Solutions available. Please see below:
1.If you have purchased the APPIOA and the steering wheel controls are not functioning correctly, you will need to remove the link between pins 7 & 8 (see Fig 1 below). Link can be removed by de-pinning the block using a small screw driver. Once link is removed from patch lead, disconnect power from steering wheel control module for 30 seconds so the Module will recognise the change to the patch lead.
2.If option 1 does not correct the problem, you will need to purchase the APPISOA. The APPISOA will suit both Pioneer and Sony head units.
The APPISOA has an inline PCB which automatically detects which brand unit is being installed and adjusts programming to suit the aftermarket unit .

Fig 1.

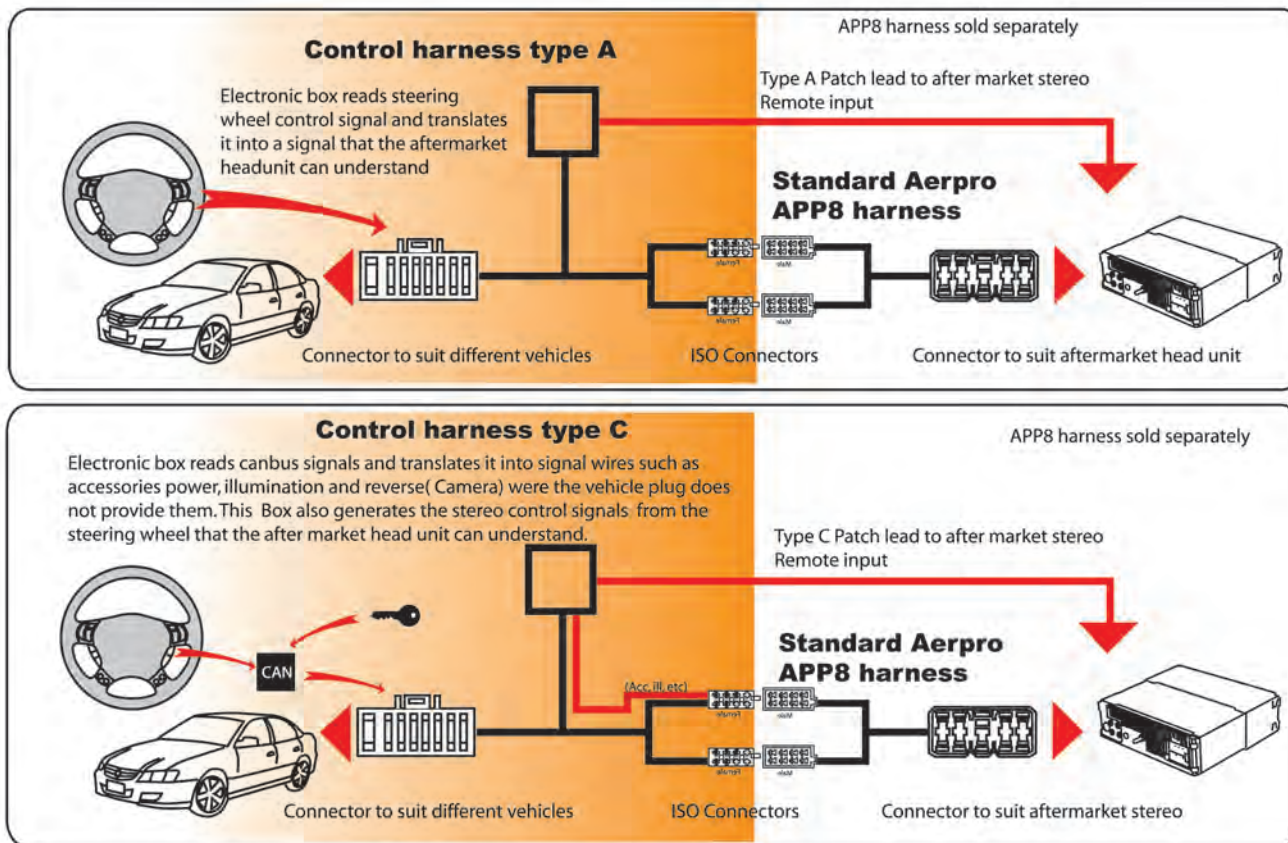

Remove the link between pins 7 & 8

Q: MY aftermarket head unit does not have a direct Steering Wheel Control Input. Is there another Option?

A: Yes, If your Head unit does not have direct steering wheel control input, you can use the Aerpro APUIR (ref. page 33). The APUIR is a universal Infra-red adaptor which enables control of an aftermarket head unit (with IR control) from the steering wheel controls of an analog Vehicle, allowing up to 10 buttons to be programmed. The head unit must have a remote control handset for the IR adaptor to learn from.

Q: What is the difference between a TYPE A and a TYPE C Control Harness?

For more information, you can find us on YOUTUBE, search for Aerpro Control harness System

ISO SECONDARY SIDE HARNESSES

ISO Secondary Side Harnesses To Radio

The APP8 series of harnesses are designed to plug directly into the back of the majority of aftermarket radios (Alpine, Clarion, JVC, Kenwood, Panasonic, Pioneer, Sony) leaving you with a male pair of ISO plugs on the other end to connect. The male ISO connectors are then simply plugged into the corresponding 'APP' plug, or existing original factory female ISO plugs (depending on vehicle), and you're away. How easy is that!
