APPLICATION		Mobile 27MHz GP		Mobile 477Mhz GP			Mobile 477Mhz GPI			Mobile 450-520MHz GPI		Mobile 477MHz GPI													
FEATURES		Pre-tuned, epoxy coated, rugged & flexible		Ideal for corrugated and rough roads. Braided conductor.		17/7PH polished S/S metal tip. Rugged & flexible.		Tapered Epoxy.		Rugged, long range. Can be mounted anywhere on vehicle. Ideal for 4WDs.		Light-weight GPI ideally suited for 2WD vehicles.		Flexible & compact. Ideal emergency antenna for temporary replacement of large colinears.		Ultra rugged, broadband, flexi dipole. Full band operation.		Rugged & reliable, includes spare emergency whip. Ideal for 4WDs. 3dB hills, 6.5dB flat terrain.		Hi performance/range. Can be mounted anywhere on the vehicle. Ideal for trucks. Mirrors & gutters.		Convenient, all situations covered. Rugged dual antenna, fiberglass enclosed. 3dB hills, 6.5dB flat terrain.		Compact and rugged. Fiberglass enclosed. Removable.	
LENGTH (cm)		92		65		67		150		130		87		31(X) 33(XC)		33		93 (6.5) 16 (3)		85		120 (6.5) 50 (3)		50	
GAIN (dB)		0		4.5		6		9		6.5		4		4		3 / 6.5		6.5		4 / 6.5		3			
TERMINATION		VHF Base 5/16" F thread		UHF Base 5/16" female thread			UHF M-Base			Stud (X) UHF M-Base (XC)		UHF M-Base		5m RG58, FMEs, UHFp adaptor (supplied)											

dB gain reference is relative to 1/4 wave on ground plane.

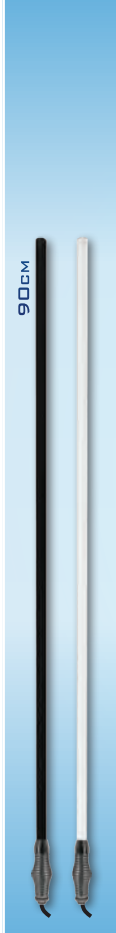

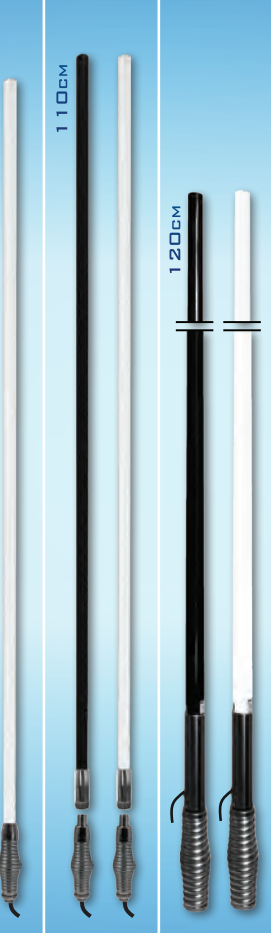

GPI (Ground Plane Independent)
Antenna operates independently of vehicle and can be mounted anywhere.

GP (Ground Plane)
Antenna requires UHF antenna base with contact to vehicle to operate.

Refer to back page for an in-depth antenna guide.

BC400

UHF CB PORTABLE RADIO

- 5/2/1W Output Power
- 80 Channel CB (477MHz)
- 48 Dealer Programmable Channels (403 - 520MHz)
- Rugged to MIL-STD-810 D/E/F
- IP65 Rated

Powerful Audio

A powerful 1000 mW speaker ensures high quality, clear, crisp sound, even in noisy environments.

Built In Voice Inversion Encryption

The scrambler feature provides enhanced security for your important public safety and private security communications.

Selectable CTCSS Privacy Tones

CTCSS Tones can be selected via the front key pad of the radio as required. This allows the user to eliminate interference from other local users on the same channel when they choose, providing privacy.

Rugged & Reliable

The BC400 series portable has been built to withstand the most demanding and harsh environments and complies to MIL-STD810 D, E, & F.

Water + Dust Resistant IP65

The BC400 series portable is rated to IP65 providing protection against dust and low pressured jets of water.

Multiple Signalling Options

These radios provide a wide range of signalling options allowing dealers maximum flexibility in configuring systems. Signalling options include: CTCSS, 2 Tone, 5 Tone, DTMF encode and decode.

INCLUDED RADIO ACCESSORIES

Remote Speaker
Microphone

Rapid Desktop
Radio Charger

240V AC
Adaptor

12V DC
Adaptor

+ Antenna, Belt Clip & Handstrap

A wide range of optional professional accessories are available. Please refer to our website.

ANTENNA ACCESSORIES

MOUNTING, BASES, LEADS & MORE

S/S - Stainless Steel
ZPS - Zinc Plated Steel

MOBILE ANTENNA MOUNTING

02714S	Fold Down Gutter Bracket S/S
02726S	Heavy Duty Gutter Bracket S/S

ANTENNA SELECTION GUIDE

WHICH ANTENNA DO I NEED?

Gain describes the shape of the radiation from an antenna. Use a higher gain antenna for better performance in open flat terrain. Use a lower gain antenna for better performance in rough mountainous terrain.

We recommend the use of a lower gain antenna for the communications in vehicle convoy situations.

When operating between mountainous and open terrain, think about choosing an antenna with interchangeable high gain and low gain whip tops, or use two antennas with an RF switch.

Note that Stainless Steel whip antennas will not last on corrugated roads. They are not suitable for this application.

GP/GPI RADIATING PATTERNS

Ground Plane Independent (GPI) antennas can be mounted anywhere on the vehicle.

These antennas work independently of the vehicle body, and as such they provide consistent performance all the way around the antenna.

Grounded Plane (GP) antennas rely on the metal surface of the vehicle for performance. If you mount this style of antenna on the edge of a vehicle, the radiation pattern will be biased towards the area with the largest amount of metal (an offset pattern).

There will also be a deterioration in the VSWR of grounded antennas that are mounted on the edge of the vehicle. Grounded antennas generally should only be mounted in the centre of the vehicle roof.

CONNECTOR ADVICE

We recommend to add a thread locking adhesive (eg Loctite 242 Blue – Threadlocker Medium Strength) at the interface between the cable connector (FME socket) and the UHF plug adaptor as it's possible for this connection to vibrate loose over time.

Exposed connectors should be sealed with self amalgamating tape such as Benelec P/N 5052219BK or equivalent.

CABLE ADVICE

Care must be taken to not damage, cut or crush the coaxial cable when routing it to the transceiver through a vehicle.

We recommend to seal any points where the cable enters the vehicle.

MOUNTING TIPS & ADVICE

- For better performance locate the antenna higher on the vehicle.
- Brackets and antenna mountings are to be secured properly.
- Antennas must be mounted vertically, this is particularly important with higher gain antennas.
- Avoid affixing any object to the antenna as it could affect the performance of the communications system.
- Ground Plane antennas need to be fitted direct to vehicle panels, as bracket mounting will compromise the performance.
- Do not mount antennas close to each other. Min distance should be 70cm between antennas. The further apart the two antennas, the better the performance of each respective antenna.
- Do not mount antennas closer than 70cm to any metal vertical surface.
- Do not mount antennas operating on the same band, at the same horizontal level unless a switch selects them.
