

RECHARGEABLE BATTERIES SUITABLE FOR KAB-BE & LBB-3

Please note:

Standard 18650 Li-Ion batteries have a built-in protection fuse circuit which results in these batteries being slightly longer.

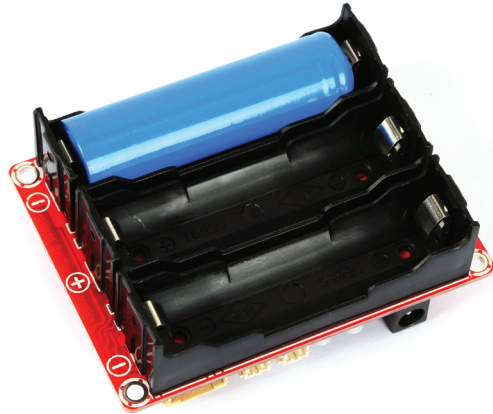

The longer batteries do not fit into the KAB-BE and LBB-3 charger modules.

We have available the shorter batteries, however they do not have the built-in protection.

As the KAB-BE and LBB-3 have a control circuit with extensive protection incorporated, the shorter batteries can be used in the KAB-BE and LBB-3 charging modules safely.

Order Code. BAT-KAB

(Sold individually each)

CAUTION! BAT-KAB BATTERIES ARE TO BE USED IN KAB-BE & LBB-3 ONLY
