

## RGBW – 5-Wire LED Strip Series

- The differences with the two types are not on the Remote Controls but on the **Controller**.
- There are **no distinguishing marks on the two types of Controllers** to differentiate between them.

### RF CONTROLLERS

- **Controller Type RGBW -3M** (A, above) will only work with Remote Controls that are **Paired** to it (Code Matching)  
This, is what is called “**1 to 1 match code**”
- **Controller Type RGBW -3U** (B, above) works with **ALL** Remote Controls. Does **not need to be Paired** to a R/Control.  
This is what is called “**Universal Code**”

### RF REMOTE CONTROLS

- **All** Remote Controls can be paired to the Code Matching (RGBW -3M) Controller.
- **ONLY Paired** Remote Controls (paired to RGBW -3M) can control **both** ‘RGBW-3M’ and ‘RGBW-3U’ Controllers.
- **UNPAIRED** Remote Controls can **ONLY** work with RGBW -3U Controllers.
- **Maximum of 4** Remote Controls **ONLY** can be paired to one Code Matching (RGBW -3M) Controller.
- One Remote Control can operate **multiple** “respective” Controllers (as per Manual)
- **RGBW-1 (IR)**

The **RGBW-1** Controller and Remote Control works with the RGBW (5-wire) LED Strips.

- The **AMP-L 4** (RGBW Amplifier) is compatible with all RGBW 5-Wire system and works with both 12VDC and 24VDC.
- **RGBW -BT** – Optional Bluetooth type Controller

**Includes free App** can be scanned and downloaded onto a Mobile Phone to Enable Bluetooth on the Mobile Phone and pair with the Controller. Control the LED Strip via the App.
