

V9T3

The Blueeye V9T3 is built on the foundations of its predecessor, the Blueeye V9T2. It contains all the existing features of the Blueeye V9T2. Furthermore, to enhance the user experience, the Blueeye V9T3 further facilitates ease of use with the addition of an LED display screen with functional display settings. The incorporation of this new feature means that accessing media has never been more convenient.

The BlueEye V9T3 is the ideal 3D Full HD 1080P Media player, combined with a dual DTV tuner and a HD video recorder PVR; it is a perfect home entertainment solution. Our personal video recorder (PVR) offers an easy way of combining the TV tuner, TV recording and HD playback functions of your digital video and audio files. More importantly, the BlueEye V9T3 is able to decode, playback and output High Definition 1080p videos through the HDMI interface. With thanks to the infallible combination of the latest HDMI 1.4 with a 3D television as well as a pair of 3D glasses (not include), you can enjoy the playback of your 3D movies from the BlueEye V9T3. As not all the 3D movie formats are supported. It supports a vast range of media formats including HD MPEG2, HD VC-1, HD AVC/H.264, QuickTime MOV and RMVB, which can be stored on either your internal hard drive or external USB devices. Furthermore, the advanced network function allows you to browse the content on your PC or NAS in the comfort of your own living room and play it on your big screen TV. It also supports NAS with built-in Samba Server, which enables you to share the whole hard drive to the network, so you can easily access any content via your computer.

Thankfully, the BlueEye V9T3 also has a built-in Dual Tuner which gives you the opportunity to watch and record different channels simultaneously, or even to record two channels at the same time. For your convenience, two television shows can be programmed to record at the same time, or if you prefer, one show can be recorded on one tuner while you watch a TV program on the other tuner. With the BlueEye V9T3, it is also possible to watch pre-recorded content while both the two tuners are being used to record other shows.

Internet TV and Radio performance will vary according to availability in the transmitting region - not all channels will be available in all areas due to firewalls /content-restrictions/geographic DRM. Including YouTube.

Main Features:

- Super Low Noise Fan
- Full 3D - HDMI 1.4 - Play 3D BD-ISO
