

The Hills Antenna FB607316 Satellite Universal Mount is the latest evolution of this model.

It has been designed for multiple installation applications.

The bent pole now has a 44.5mm diameter with no swaged top section, making it ideal for use with the FB607313 Starlink Pole Adapter.

The baseplate has been improved with slotted mounting holes to accommodate various metal roof profiles.

The included cyclone washers and rubber seals provide a sturdy surface for the connection of the two stay bars.

The FB607316 is made from galvanized steel and powder-coated for extra protection.

Its unique black powder-coated finish blends in nicely with its surroundings.

It can be used with or without the included telescopic stay bars.

Either option offers a sturdy mount for different types of satellite dishes and antennas.

All accessories are included in the kit for easy assembly.
